

WHAT OUR CUSTOMERS ARE SAYING

HOW SAFETYNET WORKS:

- Increases participation and competency in your safety process
- Enables you to focus limited resources on critical problem areas
- Establishes a link between safety observations and claims so that you can predict and prevent your next incident

DBO2 SafetyNet reduces accidents and injuries. DBO2 lowers the cost to collect field observations, increases management visibility into safety performance gaps and frees up valuable time for the safety and risk management teams, increasing overall project profitability.

SafetyNet is the most advanced SAFETY DIAGNOSTICS and injury prevention service available.

“SafetyNet is a very effective tool in quantifying losses. It provides the value that has always been missing from observations, projects, and the safety process as a whole. By allowing us to quantify our results, it gives us greater vision. The possibilities are endless with SafetyNet.”

RICHARD RESNICK VICE-PRESIDENT
TANENBAUM-HARBER CO. INC.

SafetyNet promotes INCREASED ACCOUNTABILITY and a meaningful way to measure qualitative involvement in the safety process.

“SafetyNet has truly changed the loss control environment for those who have taken the next step in site safety. It is the only system I have seen that provides real-time, real-life accountability. There is no way a person or team of people can gather the information that comes in on a daily or weekly basis and dissect it to make it useful and practical. SafetyNet accomplishes both. Combining SafetyNet with a strong loss prevention program is equivalent to when people began to wear hard hats, steel-toed boots, or began tying off. It will make a significant difference.”

DAVE ALVARADO CEO
VRT INSURANCE SERVICES

“We are using SafetyNet to take advantage of the surplus of audit features. In particular, I look at positive audits versus negative audits to assess accountability for people and projects. I use this feature as a tool for defining bonuses, pay raises, and promotions.”

TIM SIROFCHUCK CORPORATE SAFETY AND HEALTH DIRECTOR
CLARK CONSTRUCTION GROUP

SafetyNet fosters shared communication of consistent information among multiple parties, increasing **JOBSITE VISIBILITY and productivity.**

“For the first time ever, our contractor, insurance carrier and broker were able to collaborate using the same risk information to reduce accidents and injuries. We literally moved from months to minutes in time spent between hazard identification and operational involvement.”

FRITZ LEITENBERGER RISK ENGINEER
ZURICH NA

“Through its user-friendly reports, SafetyNet has allowed me to give companies the vision to focus exactly where training is needed in their organization. We can focus resources ahead of time, before a potentially life-threatening situation arises.”

BOB HEGBURG PRINCIPAL
HEGBURG ENTERPRISES, L.L.C.

SafetyNet utilizes **LEADING INDICATORS to reduce project cost and risk, creating a long-term advantage for customers.**

“In construction we’re always doing one of two things: building buildings or selling work. There are a lot of owners that really appreciate the fact that we use SafetyNet. It’s been a huge selling point in the sense that they’ve got the opportunity to look at the leading indicators on their site. It demonstrates that we take steps toward being proactive. We’re not just cleaning up messes. This is a big selling point to safety-conscious owners out there.”

TONY TOPPENBERG BUSINESS UNIT SAFETY DIRECTOR
TURNER CONSTRUCTION

“DBO2 SafetyNet has saved us a great deal of investment dollars and allowed us to accelerate our goals and make us a better company. Evidence of further savings has come through our annual insurance renewal.”

TOM KADER CEO
SEDALCO CONSTRUCTION SERVICES
